

## Lime Tree

### Latin name:

*Tilia cordata*, *T. platyphyllos*, *T. tomentosa*, *T. euchlora*

### Description:

The up to 30 metres tall trees have a characteristic cylindrical - ovoid shape. The leaves are heart-shaped. Lime trees are frequently planted as ornamental trees, very often for tree-lined walks. During flowering time, a strong sweet odor fills the neighbourhood of the trees, which may lead to the opinion, lime trees would cause allergies. In fact, the allergenicity of their pollen is low.

### Start of the season:

Lime trees mainly start flowering in June, with the possible extent to May or July, depending on the geographical situation.

### Allergenicity:

Lime trees have no or, in the worst case, very low allergenic potential.

### Crossreactions:

No considerable cross reactions are known.
